OECS HR & Payroll

Brochure / Flyer v5 · Caribbean workforce management

From employee folder to approved payroll

Prepare HR records. Choose pay rates and hours. Run payroll for your dates and departments. Ask the AI Payroll Officer to review the draft, then approve with confidence and retain clear reports.

Flexible for your workforce

Monthly • Semi-monthly • Weekly • Custom final-pay dates
Hourly and daily rates • Weekly hours • Departmental and consolidated reports

Workforce on the Move

Clock in at any job site, on any phone or company tablet.
Every punch syncs to one payroll.

CONSTRUCTION | LANDSCAPING | RADIO & TV | HOSPITALITY

Your people don’t sit at one desk. Crews build on Site 1 today and Site 2 tomorrow. Gardeners visit five properties before lunch. Camera crews chase the story across the island or overseas. OECS HR & Payroll follows them: workers punch wherever a clock is active and the platform collects every minute into a single timesheet that is ready for the AI Paymaster and your approval.

Any site
roaming workers

Same day
site-to-site moves

Phone or tablet
one synced timesheet

Built for companies that never stand still

Landscapers & grounds crews

Visit hotels, villas and estates in one day. Each property can be a job site; crews punch on arrival and departure so clients and payroll see real time on each property.

Radio & TV stations

Reporters, camera operators and engineers work in the studio, at outside broadcasts and on assignments. Studio staff use the shared tablet; field crews use their own phones. Same timesheet.

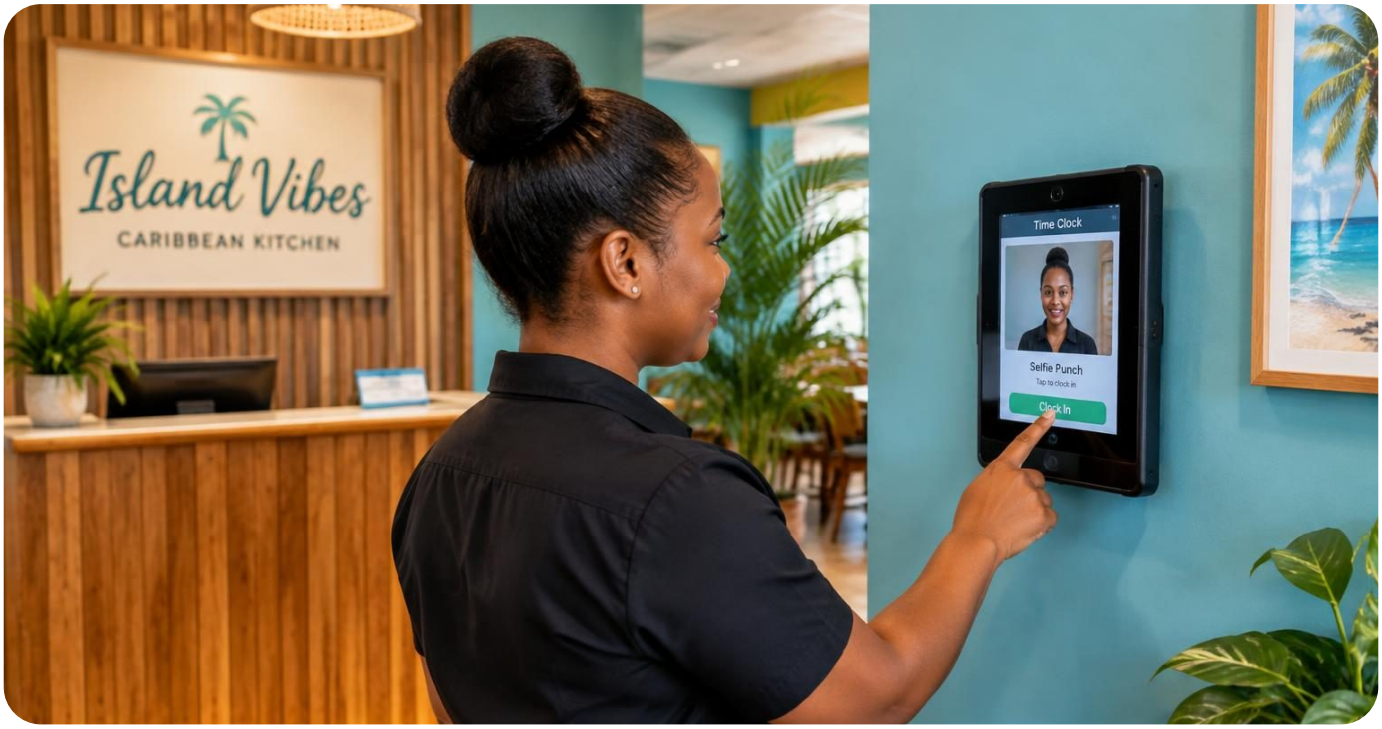

Construction & field services

Move crews between projects as work demands. Roaming workers may clock in at any active site, and each punch records where the work happened.

Working in more than one island or abroad? Each company keeps its own sites, clocks and payroll rules, and administrators with multi-company access switch between them with one login.

Personal phone or company tablet

Staff choose what is convenient; the platform keeps one record.

MY PHONE

- Open the personal link, QR code or WhatsApp invite
- Add the app to the home screen
- Clock in, lunch out/in and end shift
- Location checked at every punch
- Offline punches queue and sync later for manager review
- My dashboard: hours, days, late arrivals, estimated pay

COMPANY TABLET

- Reception, kitchen, studio or site office
- Activated by an admin with a 15-minute code
- Many staff share one device
- Selfie can be required per company
- Hands-free voice option uses the name on file, with a selfie
- Voice and offline punches always go to a manager

Phones and tablets feed the same attendance record, so the AI Paymaster prepares payroll from every site and an administrator still approves before anything is saved or paid.

Your payroll manager’s workflow

01 / Prepare

Maintain employee folders, even without email. Select departments, job titles and schedules; add your own entries. Store contracts and certifications privately with expiry dates and controlled sharing.

02 / Calculate

Choose the employee’s rate and weekly hours. Hourly pay uses the saved monthly equivalent—not a fixed 9-to-5. Example: XCD 10/hour × 36 hours/week = XCD 1,560/month, or approximately XCD 360 for a weekly run before deductions.

03 / Select the run

Pay one department, two or many. Choose monthly, semi-monthly, weekly or custom dates and specific staff for final pay. Review prorated salary and deductions; manually check one-off additions and final-pay entitlements.

04 / Ask the AI Payroll Officer

Request a read-only review of anonymous draft amounts and flags. Get a summary, issues to investigate and next steps. Inspired by payroll assistance and review patterns in Gusto, Rippling and ADP—not integrations with those products.

05 / Approve and report

The manager approves; the server saves live payroll and payslips together and rejects overlapping paid dates. Export department and consolidated reports. Payment, payslip delivery and statutory filing are separate tasks to verify.

06 / Prepare the accounting handoff

Map payroll earnings, NIC/PAYE liabilities and deductions to QuickBooks accounts. QuickBooks scaffolding includes mapping and simulated sync; production authorization and posting still require setup and verification.

Caribbean HR, with practical safeguards

A joined-up operational platform

Recruit applicants, track compliance expiry, organize rosters and sites, review attendance, record patrols and incidents, and prepare client invoices. Voice input and command navigation support field work where device and service permissions allow.

Multi-island configuration

Current payroll configurations cover Saint Lucia, Antigua and Barbuda, Saint Kitts and Nevis, Dominica and Grenada. The system can be extended for other islands with validated local rates and rules. Do not assume every Caribbean jurisdiction is already configured or certified.

AI assists. People decide.

AI does not change wages, approve runs, transfer money or certify statutory compliance. Payroll uses contractual monthly-equivalent estimates rather than actual attendance hours. Check overtime, holidays, severance and unusual schedules manually.

Practice without touching live payroll

Fictional Smiley’s Tinting Services samples and the resettable simulated attendance clock support training. They stay separate from live attendance, payroll, billing and employee accounts.

Share the guide and train your team

https://caribbean-payroll-with-quickbooks.lovable.app/training-public
Latest resources become available on the published site after republishing. Managers can upload company training documents. Keep confidential employee records in private folders.

New: faster onboarding, smarter reports

Three ways to start a company

Start from scratch, use our Excel onboarding template, or bring an existing payroll sheet. Coloured buttons with hover guides explain each path. Template examples are placeholders to replace; Abort setup discards an unfinished import without saving.

Spreadsheet to payroll, compared

The AI Paymaster reads a past payroll sheet, asks only what it cannot work out, rebuilds every payslip with platform rules and shows each difference before an administrator approves anything.

Staff never miss a punch

Optional phone reminders 5 minutes before shift start and end, plus an alarm for missing punches. Staff see draft pay before pay day and send punch corrections or pay questions for manager approval.

Caribbean-ready reports

Payroll Register & Summary with cash requirement and employer liabilities; Statutory Remittance Report with local tax-form wording for Saint Lucia, Jamaica, Trinidad & Tobago, Barbados and Guyana; Time & Attendance Audit with overtime, double time, late and absence flags and absence cost.

Honest limits

Some levy rates are estimates to confirm with an accountant. Phone alarms ring only while the app is open. Reports support remittances but are not filed government forms. People approve payroll; AI never pays.
