Company Setup Guide

From existing spreadsheets to your first reviewed payroll

Install → Clock → Resolve → Prepare → Approve → Report

Visual steps for staff, payroll managers and company administrators.
Fictional illustrations; no private employee records.

Training Hub

Setup Guide v2 • Updated 01 November 2026

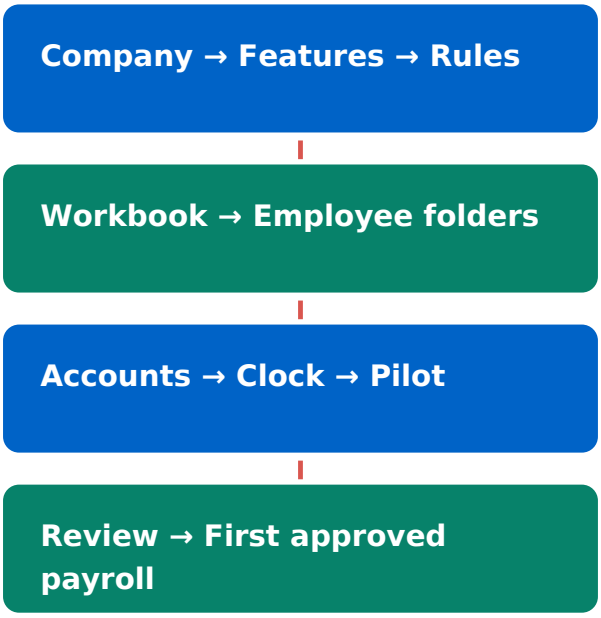

AI assists. The manager approves. Wage payment stays separate.

NEW COMPANY

First payroll: the setup map

Platform administrator + company administrator

Set up → Import → Test → Approve

ILLUSTRATED WORKFLOW

1 One guided journey

Use the industry pack to start, then replace defaults with the company's actual rules and records.

2 Separate the decisions

A setup link activates a company; an employee invite creates access; a payroll approval saves a pay run.

3 Start small

Test one permitted employee before sharing the clock with the whole workforce.

CHECK BEFORE YOU CONTINUE

Use the User Guide alongside this setup checklist.

All illustrations use fictional values. Never import example employees into a live customer company.

PLATFORM ADMIN

Issue the company setup invitation

Companies → Set up company

Create link → Customer signs in → Verify email → Activate

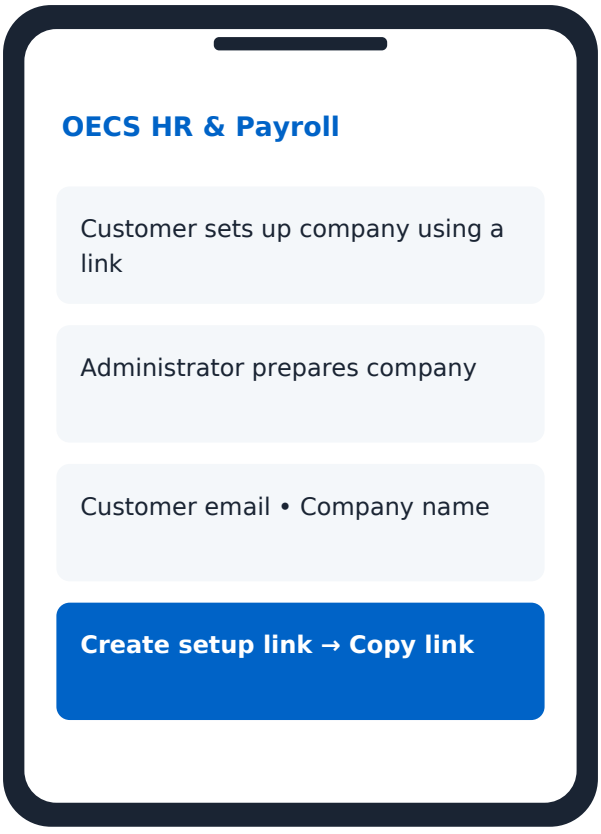

ILLUSTRATION • NOT A LIVE SCREEN

1 Choose the setup method

Prepare the company yourself or let the customer configure it with a setup link.

2 Name the customer correctly

Use the customer's intended administrator email and correct business identity.

3 Send the link privately

Copy and send the one-time link. It expires in seven days and requires the invited verified email.

CHECK BEFORE YOU CONTINUE

The customer activates the intended company rather than another user's workspace.

Expired or revoked invitations need a new link. Reopen the original invitation after email confirmation.

Three ways to set up a company

Companies / top buttons (hover for a guide)

Choose → Fill / Upload → Compare → Approve

ILLUSTRATED WORKFLOW

1 Start from scratch

Type the details into a short form, or send the customer a one-time setup link.

2 Use our Excel template

Download the blank workbook, fill it in and upload it on Payroll Import. Example placeholders must be replaced.

3 Bring your payroll sheet

Enter the company, industry and country, then upload a past payroll. The AI Paymaster asks questions and compares results.

CHECK BEFORE YOU CONTINUE

Placeholder examples (names, NIC, tax numbers, address) have been replaced with real values.

Changed your mind? Select Abort setup on Payroll Import. The sheet and answers are discarded; nothing was saved.

COMPANY ADMIN

Review an industry starting pack

Configure your company → Industry onboarding pack

Industry → Features → Review → Activate

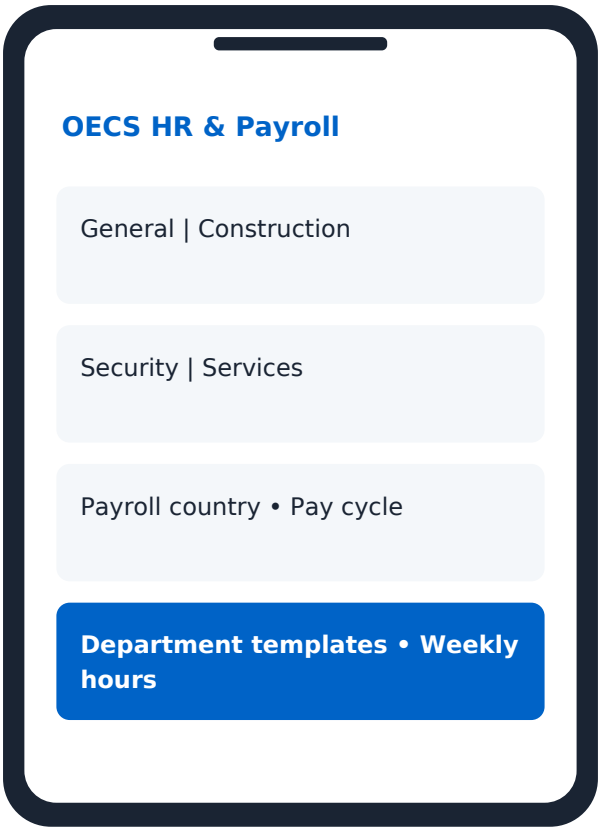

ILLUSTRATION • NOT A LIVE SCREEN

1 Choose the best starting point

For a construction company, select Construction and inspect the proposed departments and hours.

2 Keep only required features

Review the checkboxes. Training remains available; optional operations depend on the company selections.

3 Approve reviewed defaults

Check the pack review confirmation only after validating the defaults. Activate company when ready.

CHECK BEFORE YOU CONTINUE

The proposed pack has been checked against the customer's real operation.

Changing a pack changes suggested modules. Industry metadata is not a statutory tax schedule; validate country-specific payroll separately.

COMPANY ADMIN

Gather the company's real records

Before filling the workbook

Gather → **Verify** → **Fill template**

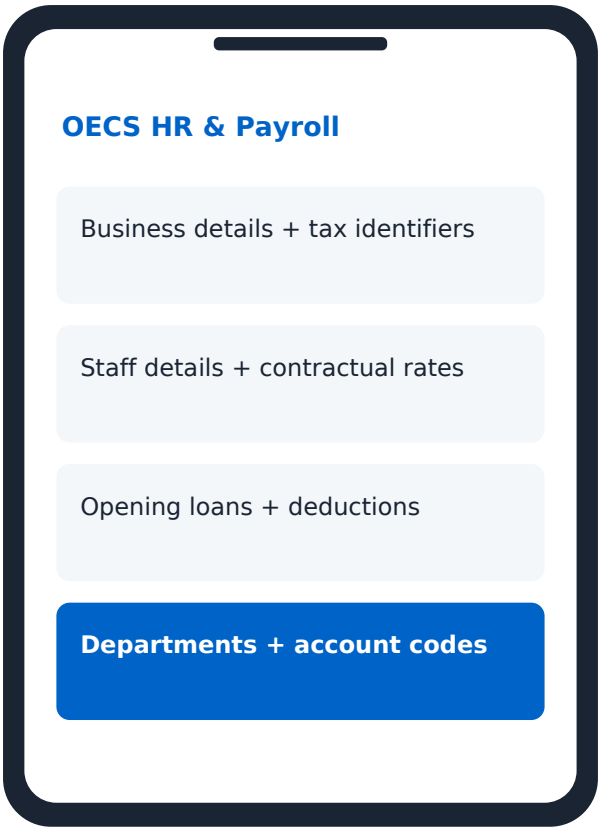

ILLUSTRATION • NOT A LIVE SCREEN

1 Use authoritative records

Obtain approved employment details, pay rates, normal hours, tax identifiers and bank information.

2 Reconcile opening amounts

Confirm loan balances, recurring deductions and allowances with the employee and accountant.

3 Choose the first pay period

Record the start/end dates and identify any prior paid periods so you do not double-pay.

CHECK BEFORE YOU CONTINUE

Every input has an owner who can resolve a question.

Protect private records. The public Training Hub is for generic resources, not confidential salary workbooks or employee documents.

COMPANY ADMIN

Fill the full onboarding template

Training → Payroll Onboarding Template (Excel)

Download → **Complete** → **Reconcile** → **Save**

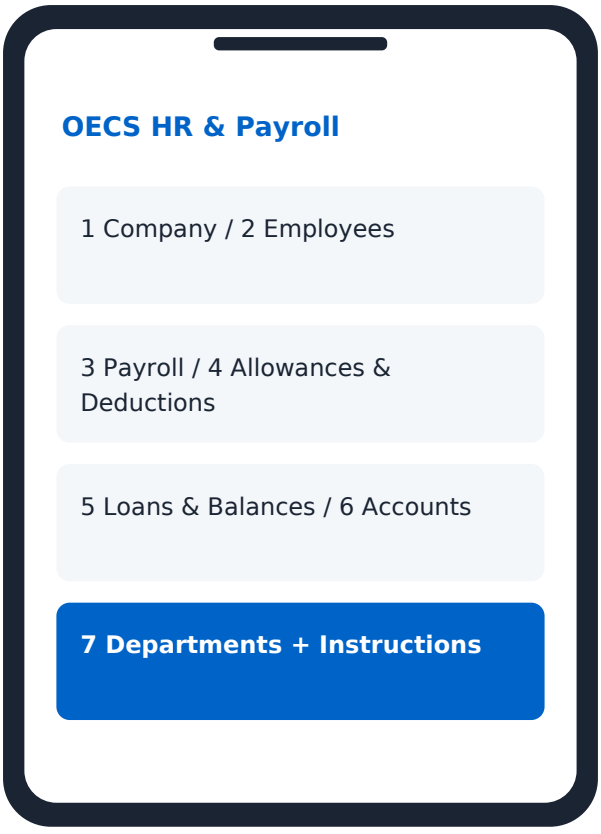

ILLUSTRATION • NOT A LIVE SCREEN

1 Use the latest workbook

Download v2 from Training, Payroll Import or the company setup link. Read Instructions first.

2 Replace examples

Fill all applicable sheets with real records. Use matching names and retain recognizable payroll headings.

3 Check the file

Reconcile payroll inputs and totals, opening loans and account mappings. Keep an unchanged source copy.

CHECK BEFORE YOU CONTINUE

All fictional rows have been removed or replaced.

Staff document attachments and credentials are configured separately. The template's Payroll figures support comparison; importing does not save a payroll run.

COMPANY ADMIN

Upload, answer and reconcile

Payroll Import · AI Paymaster interview

Inspect → **Answer** → **Compare** → **Resolve**

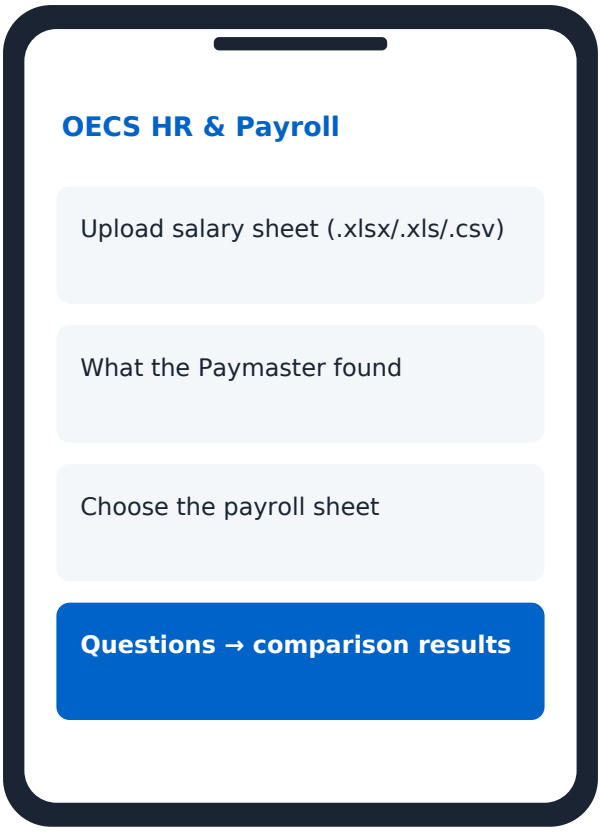

ILLUSTRATION • NOT A LIVE SCREEN

1 Select the file

Upload the completed workbook or a supported existing salary spreadsheet. Inspect the recognized sheets and counts.

2 Explain uncertain rules

Answer only from verified company policy: rate basis, overtime, NIC and PAYE. Recheck recommended answers.

3 Investigate every difference

Compare employee amounts and totals. Correct source errors rather than forcing a match to a wrong number.

CHECK BEFORE YOU CONTINUE

No unexplained material differences remain.

The interview uses programmed parsing and comparisons. Unsupported layouts may need reshaping; no general-purpose AI understanding of any spreadsheet is promised.

COMPANY ADMIN

Approve the import, then verify

Approve the import → Import employees

Approve → **Write** → **Read back** → **Reconcile**

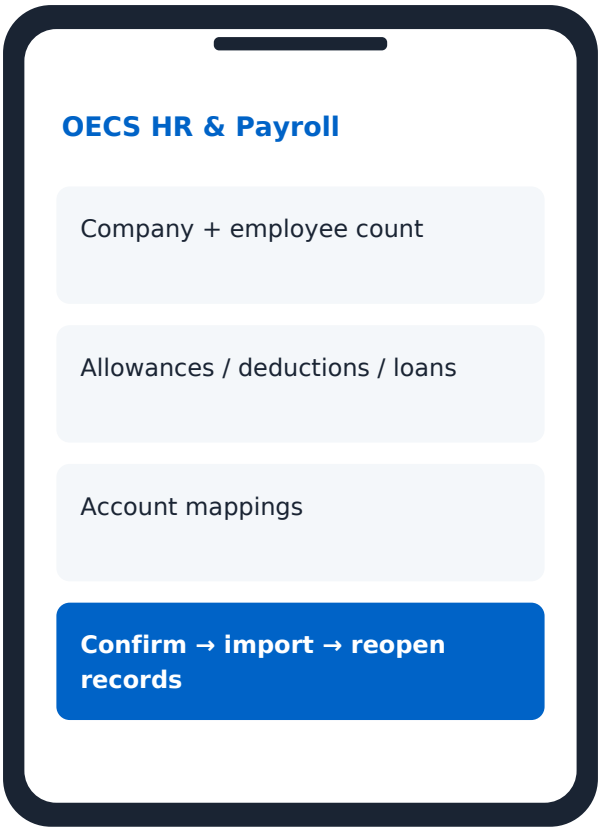

ILLUSTRATION • NOT A LIVE SCREEN

1 Review the scope

Confirm that company details, employee folders, loans and mappings belong to the signed-in company.

2 Save only after approval

Confirm and select Import employees. Retain the result counts and inspect any error.

3 Read back real records

Reopen employee folders, deductions, loans and mappings. Check saved values against the workbook.

CHECK BEFORE YOU CONTINUE

The result counts and saved values agree with your intended import.

The import is sequential, not all-or-nothing. Inspect partial writes before retrying. Duplicate-name rows are skipped; login accounts are not created.

COMPANY ADMIN

Turn employee records into access

Employees → Login & clock

Employee → **Account access** → **Clock access** → **Share app**

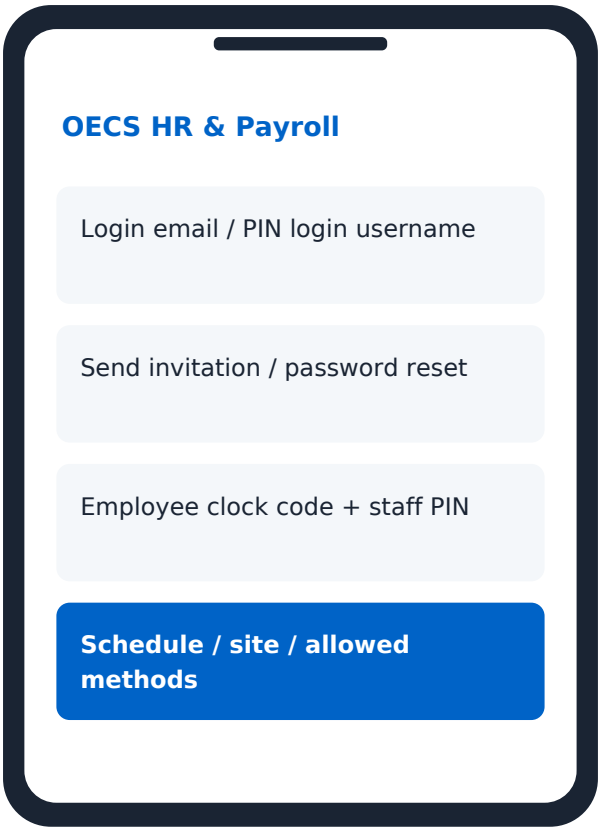

ILLUSTRATION • NOT A LIVE SCREEN

1 Separate employees and managers

Assign only the access needed. Employment records are not automatically management users.

2 Set up private credentials

Configure the account login and send the invitation. Then configure the separate clock identity and methods.

3 Enable staff self-service

Provide sign-in access for the pay preview and correction requests. A clock-only PIN is not sufficient for these panels.

CHECK BEFORE YOU CONTINUE

Each employee is identified correctly and sees only permitted records.

Employees choose passwords from invitation/reset links. Never reuse shared PINs or publish credentials in training materials.

COMPANY ADMIN + ACCOUNTANT

Check rates, deductions and accounts

Employee Payroll / Payroll Settings

Rates → **Tax rules** → **Balances** → **Mappings**

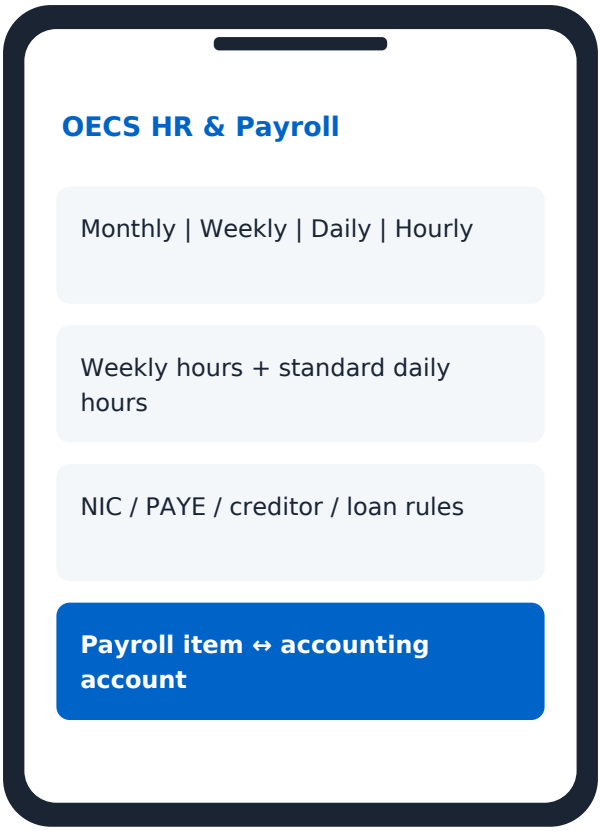

ILLUSTRATION • NOT A LIVE SCREEN

1 Validate local pay rules

Confirm jurisdiction, thresholds, rate basis and working hours. Review final-pay and overtime policy professionally.

2 Verify attendance payroll

Where enabled for hourly/daily staff, use reviewed live hours. Otherwise contractual monthly-equivalent pay is used.

3 Check account mappings

Review payroll expense, liabilities and receivables with the accountant. An account code is not proof of live QBO authorization.

CHECK BEFORE YOU CONTINUE

An accountant or qualified payroll reviewer has checked company-specific rules.

Existing configured islands are not automatic coverage for all Caribbean laws. Live QuickBooks posting and email delivery require further implementation and testing.

ADMIN + TEST EMPLOYEE

Pilot the phone workflow

Attendance → Share staff app

Staff phone → Saved punch → Request → Manager decision

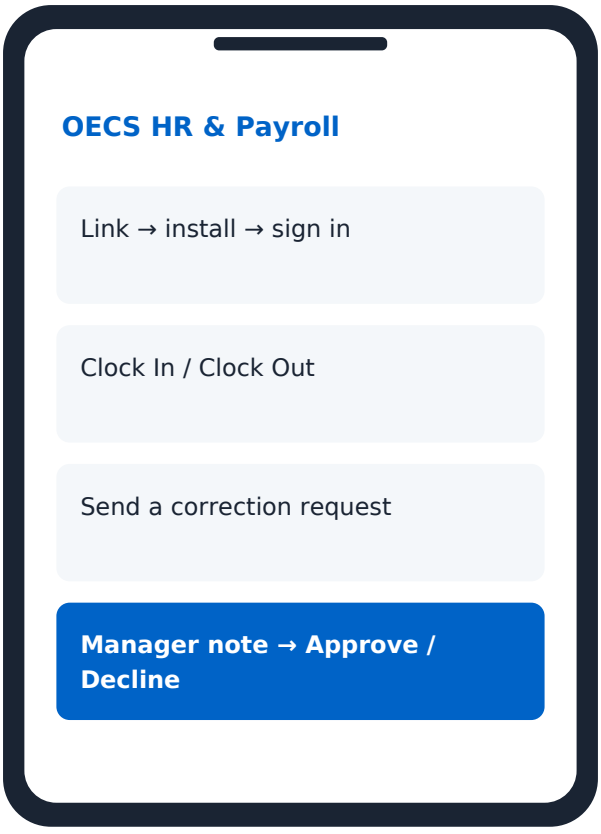

ILLUSTRATION • NOT A LIVE SCREEN

1 Choose a safe pilot

Use an authorized real employee and record actual work only. Use the isolated demo for fictional practice.

2 Test the whole staff journey

Install, allow location, clock in/out and confirm the hours. Submit a justified test request without inventing pay.

3 Verify the response

Manager reviews the request; staff reads the note and the revised approved hours before payroll.

CHECK BEFORE YOU CONTINUE

Identity, location and request access work for the intended person.

Do not approve a real payroll just to test the app. Training punches and public demo reports must remain outside live records.

MANAGER + ADMIN

Approve the first real payroll

AI Paymaster → Run Payroll → Reports

Prepare → **Audit** → **Approve** → **Verify**

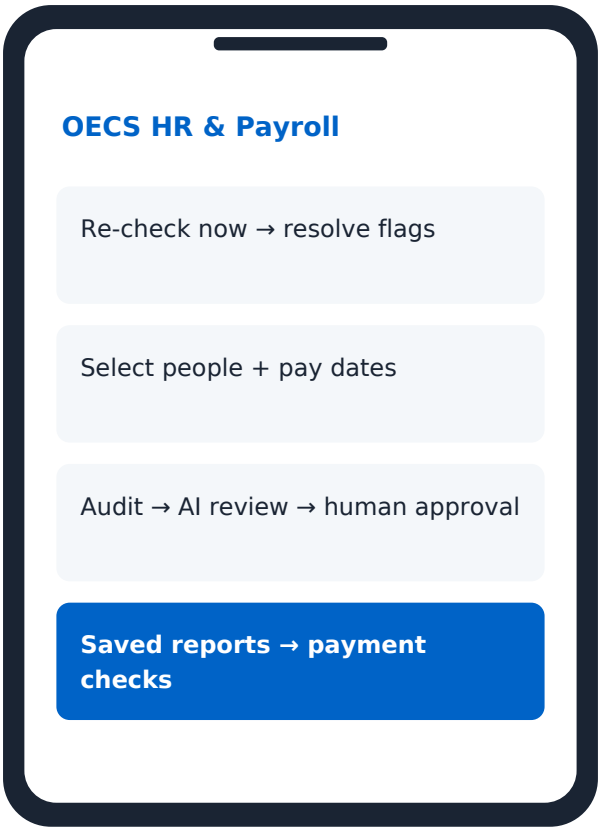

ILLUSTRATION • NOT A LIVE SCREEN

1 Prepare the final figures

Clear attendance issues, check additions and deductions, and choose the exact live period and employees.

2 Review and save

Use the AI Payroll Officer as read-only advice. A human selects Approve & Save Payroll and verifies the saved run.

3 Complete the go-live handoff

Confirm report totals, secure payslip delivery, real accounting posting and actual wage payment separately.

CHECK BEFORE YOU CONTINUE

No unexplained pay disputes, report differences or delivery assumptions remain.

Current email/QBO follow-ups are not real external delivery. Scheduled AI execution is not verified; use Re-check now and establish an operational review routine.
